classified in class 540, subclass 450+.

XXXI. Claims 1-24, drawn to compounds wherein X = AsR9 and A = NR10,
classified in class 540, subclass 450+.

XXXII. Claims 1-24, drawn to compounds wherein X = BR6R7 and A = NR10,
classified in class 540, subclass 450+.

XXXIII. Claims 1-24, drawn to compounds wherein X = As(=O)R₉ and A = NR₁₀, classified in class 540, subclass 450+.

Note: Claims appearing in more than one group will only be examined to the extent that they read on the elected invention. In addition, it should be noted the classes and/or subclasses (e.g., 540/450+) will vary depending upon the value assigned to X and A.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I-XXXIII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions are directed to different compounds which are not obvious over one another because there is no common core and a search of one group of compounds would neither anticipate nor render obvious the compounds of a different group. Thus, the inventions are distinct and a separate search of each invention would be necessary.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

ELECTION OF SPECIES

4. Claims 1-24 are generic to a plurality of disclosed patentably distinct species comprising the groups of compounds as set forth in the groups above. Hence, a burdensome search would be necessary because the inventions contain various variables that depending upon their value generate compounds not having a common core.. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Note: The Examiner respectfully requests that Applicant elect a single species for search purposes from within the elected group and assign each variable the appropriate value (e.g., R4 = hydrogen; R3 = nitrogen; etc.) and state which claims are directed to the elected species.

5. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

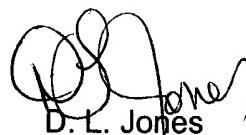

6. Due to the complexity of the restriction requirement, a telephone call was not made to request an oral election to the above restriction requirement.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. L. Jones whose telephone number is (571) 272-0617. The examiner can normally be reached on Mon.-Fri., 6:45 a.m. - 3:15 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman Page can be reached on (571) 272-0602. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
